

SUPERB VENTILATION

(Continued From Page Five)

about 8 feet above the floor and the foul air is forced out through openings at the floor levels, a constant flow being assured by the pressure of 3.5 ounces per square inch that is maintained by the blower. In the winter time the heat is supplied by three 12-foot, all-steel furnaces, known as the Lenox Electric Furnace, and distributed here by the Rich Hardware Company. Whenever climatic conditions demand, the air in winter may be passed through the washers, and thoroughly cleaned of dust or smoke. The heating plant is very efficient, being guaranteed to raise the temperature from 20 to 70 degrees in the short time of ninety minutes from the time the fire is started. The temperature is regulated by the National Automatic Temperature Regulation System.

Besides the Monroe school the Machinery and Electric Company has handled similar jobs in the Adams school, the Madison school, the Washington school, the Phoenix Union high school, the West End school, the Grant school, all in this city, also the new grammar school and two new normal school buildings at Tempe, the new grammar school at Mesa, and the new high schools at Globe, Yuma and Bisbee.

PRESSED BRICK BY**BIG TUCSON CONCERN**

The face brick of the Monroe school are exclusively the Tucson pressed brick, furnished by the Tucson Pressed Brick company through Vernon L. Clark, their Phoenix agent.

This company is headed by Mr. L. Monier, who has been in the brick business in Tucson for twenty years. Five years ago he was instrumental in organizing the Tucson Pressed Brick company, since which time they have furnished about all the pressed brick in central and southern Arizona. Mr. Clark has furnished Tucson pressed brick for the Yuma high school, the Tempe normal school, for a number of Phoenix business blocks including the Adams Hotel, National Bank of Arizona, Denotrio and the American Trust company; also the Monroe school and the Adams school buildings.

Among residences of Tucson pressed brick are those of O. H. Christy, E. Gant, H. C. Bennett.

The local salesrooms of V. L. Clark contain many samples of Tucson pressed brick, showing wall faces and fire place designs.

**WHITE MACHINES IN
HOUSEHOLD DEPARTMENT**

The twelve White Sewing machines in the household science department of the Monroe school were furnished by G. E. Garner, local agent for the White Sewing Machine company.

Mr. Garner came here eleven years ago from the White factory where he was employed as adjuster to become manager of the White branch in Phoenix. Since arriving here he has worked up a large and successful business placing White machines in several hundred homes in the Salt River valley.

The machines were demonstrated to the school board and were entirely satisfactory, meeting with all requirements.

There are now thirty White machines in use in the Phoenix schools.

**RICH HANDLES SAME
TYPE OF FURNACES**

"Have the jobbers' payroll in the home city." That is a good motto for the Phoenix booster. Everyone who has studied the important question of the distribution of commercial products realizes that in nearly all lines the jobber is an economic necessity. The more jobbers Phoenix has, the better trade service is given the merchant and the ultimate consumer or user, and in many cases better prices are made as well as a saving in time. Furthermore, the presence of the big jobbing stocks relieves the retailer of carrying such large stocks, and allows him the benefit of a more flexible capital. Hundreds of thousands of dollars have left Phoenix and Arizona in years past that have simply gone to the upkeep and profits of California and eastern jobbers. There has to be someone to buy carlots from the manufacturer, frequently the lines are such that it is simply out of question for the retailer to buy in lots large enough to make a carload shipment, and as a result the smaller shipment has imposed upon it the much greater less-than-carload rate as well as delay and great liability to damage. Speaking of this to a Republican reporter yesterday, Mr. F. E. Rich of the Rich Hardware company, said that his company was gratified indeed at the readiness with which the hardware dealers, general merchants, blacksmiths, etc., had grasped the opportunity to deal with a genuine jobber.
